CLuBS

Cross-Lingual Bibliographic Search

Cross/multi-lingual search in DE, EN, ES and FR

A retrieval platform —PubPsych— is already online. We want to improve existing translations and add new ones, improve retrieval components with the latest advances in the area.

Introduction

Motivation of the CLuBS project

- academic discourse happens in several languages
- language barrier ⇒ researchers might not understand or even find relevant articles
- basing research solely on results published in dominant languages such as English bears the risk of drawing conclusions on sub-populations [3]

Introduction

Goals of the CLuBS project

- aims to improve multilingual access to academic bibliographic information
- develops, implements & evaluates different approaches to enable Cross-lingual Information Retrieval (CLIR)
- prototypical domain: psychology with PubPsych search engine (<https://pubpsych.eu>)

Introduction

PubPsych – https://pubpsych.eu

The screenshot shows the homepage of the PubPsych website. At the top, there is a dark header bar with the text "PubPsych" and "Startseite". Below this is a browser-style interface showing the URL "https://pubpsych.zpid.de/pubpsych/" in the address bar, along with various icons for back, forward, search, and navigation.

The main content area features a large, rectangular image of a campfire with glowing embers and logs. Overlaid on this image is a white search bar with a magnifying glass icon and the word "suchen". To the left of the search bar, there is a dark sidebar with the "PubPsych" logo and two links: "Erweiterte Suche" and "Hilfe".

On the right side of the page, there is a language selection menu with "En | Es | Fr | De" and a red star icon. Below this are two red link buttons: "Startseite" and "Hilfe". At the bottom of the page, there is a footer bar with copyright information ("© PubPsych") and links to "Kontakt", "Nutzungsbedingungen", and "Über PubPsych".

Introduction

PubPsych

- database of psychological literature, treatments, test and research data
- aggregates bibliographic metadata from nine databases produced by several international partners, e.g. MEDLINE, PSYNDEX and NORART
- metadata mainly in English, German, French and Spanish
 - very uneven distribution due to different indexing practices
 - 20% of all content has no English metadata; 5% of content retrievable with Spanish
- ⇒ results on a topic vary depending on query language

Introduction

A typical document in PubPsych

DFK	0272643
Titel	Selbstzuwendung, Selbstakzeptanz, Selbstvertrauen. Psychotherapeutische Interventionen zum Aufbau von Selbstwertgefühl
Person(en)	Potreck-Rose, Friederike; Jacob, Gitta .
Quelle	Stuttgart: Klett-Cotta, 2013 (8., erw. u. aktualis. Aufl.), 245 S., EUR 26,95 [Leben lernen, Nr. 163], ISBN: 978-3-608-89148-5
Jahr	2013
Sprache	German
Abstract	<p>Psychotherapeutische Interventionen zum Aufbau von Selbstwertgefühl werden vermittelt. Im Theorieteil wird das Grundlagenwissen zusammengefasst und die vorhandene Literatur zum Thema Selbstwert wird auf ihren Nutzen für die psychotherapeutische Arbeit hin betrachtet. Im Praxisteil werden methodisch aufeinander aufbauende Interventionen zur Steigerung des Selbstwertgefühls vorgestellt. Das zugrunde liegende therapeutische Konzept definiert den Prozess der Selbstzuwendung als entscheidenden Schritt für die Entwicklung und Förderung von Selbstakzeptanz und Selbstvertrauen. Die konkreten Interventionsvorschläge werden ergänzt durch eine umfangreiche Sammlung von Übungen für Patienten. - Inhalt: (A) Theorie. (1) Zum Stellenwert von Selbstwert, Selbstvertrauen und Selbstakzeptanz in der Psychotherapie. (2) Theoretische Grundlagen (Begriffsbestimmungen; Korrelate des Selbstwertes; Quellen des Selbstwertes; Dynamik des Selbstwertes). (3) Die vier Säulen des Selbstwertes (Selbstakzeptanz; Selbstvertrauen; soziale Kompetenz; soziales Netz). - (B) Praxis. (4) Stufen der Selbstzuwendung: Sensibilisierung des Ichs (Achtsam sein; sich selbst liebenvoll begegnen; für sich sorgen); (5) Schritte zur Selbstakzeptanz: Differenzierung des Wertesystems (sieben Lebensgebiete; Rollenkünster; Energiekreis; Energiesampeln). (6) Wege zum Selbstvertrauen: Selbstregulation und Selbstkontrolle @Bedeutung von Selbstregulation und Selbstkontrolle für den Selbstwert; Grundprinzipien der Selbstveränderung; mit Zielen arbeiten). (7) Risiken selbstwertstärkender Interventionen. (8) Interventionen zum Aufbau des Selbstwertgefühls im psychotherapeutischen Gesamtkonzept. - Das Buch wurde für die achte Auflage erweitert und aktualisiert.</p>
Schlagwörter	Selbstwertgefühl - Selbstvertrauen - Psychotherapeutische Techniken - Selbstregulation - Selbsthilfegermögen - Selbstkonzept

Queries in PubPsych

Query languages

Queries in PubPsych

Query types and distribution in different domains

Queries in PubPsych

Approach

- 88.4% of queries in PubPsych are informational:
mapping approach
- Obtention of **quadrilingual** lexicons
 - Avoid direct language detection
- In-domain but also out-of-domain lexicons
- Seed for query translation
- Seed of the seed: **MeSH** (Medical Subject Headings)

Complex d'Èdip

En la **teoria psicoanalítica**, el **complex d'Èdip** planteja la idea que, durant l'**etapa genital** del desenvolupament del nen (una de les **etapes psicosexuals**), que té lloc dels 3 als 6 anys, aquest comença a sentir atracció sexual envers el progenitor del sexe oposat. El nen se sent atret per la mare i comença a odiar el pare, ja que aquest té la mare. Aleshores es desenvolupa un sentiment de **culpa**, ja que el nen sap que no està bé odiar el pare. Aquest conflicte es resol mitjançant la **identificació**, en què el nen adopta característiques del pare. El concepte va ser desenvolupat per **Sigmund Freud**, basant-se en la figura **mitològica d'Èdip**. Freud l'anomena un complex humà universal (**filogenètic**), i la causa de bona part de la culpa inconscient. Postula que existeixen diferents formes d'enfrontar-se al complex: en el cas dels nens, a través del **complex de castració** i en el de les noies en l'**enviada del penis**. Un complex mal resolt, segons Freud, conduceix a la **neurosi, pedofilia o homosexualitat**. Tot això no es pot detectar molt fàcilment però es nota amb el pas del temps.

Tot i que molts cops s'utilitza el nom de "complex d'Èdip" indistintament per a ambdós sexes també es pot anomenar **complex d'Electra** l'etapa de desenvolupament psicosexual corresponent per a la nena per a distingir-la de la del nen.

Crítica [modifica]

Aquesta doctrina psicoanalítica segueix sent controvertida avui en dia, i ha estat criticada o revisada per altres autors com **Otto Rank, Carl Jung, Melanie Klein, Wilfred Bion, Jacques Lacan** o **Hans Keller**, i ha estat especialment figura de polèmica en el **feminisme**.

Els autors **Gilles Deleuze i Félix Guattari** realitzen una crítica del Complex d'Èdip com a estructura autoritària a la seva obra en dos volums **Capitalisme i Esquizofrènia**, en la qual desenvolupen la teoria de l'**esquizoanàlisi**.

Això és un **esborrany** sobre **psicologia**. Amplieu-lo! (citant les fonts)

Queries in PubPsych

Application to Query Translation

On-line translation of the queries using the
language-independent version of the quadrilingual lexicon

- Contrary to CT translation, we do not know the language of a query

Duplicates (*multiplicates!*) among languages do exist.
Priorities:

- 1 query language frequency: $de \rightarrow en \rightarrow es \rightarrow fr$
- 2 lexicon *domainess*: MeSH → Rest

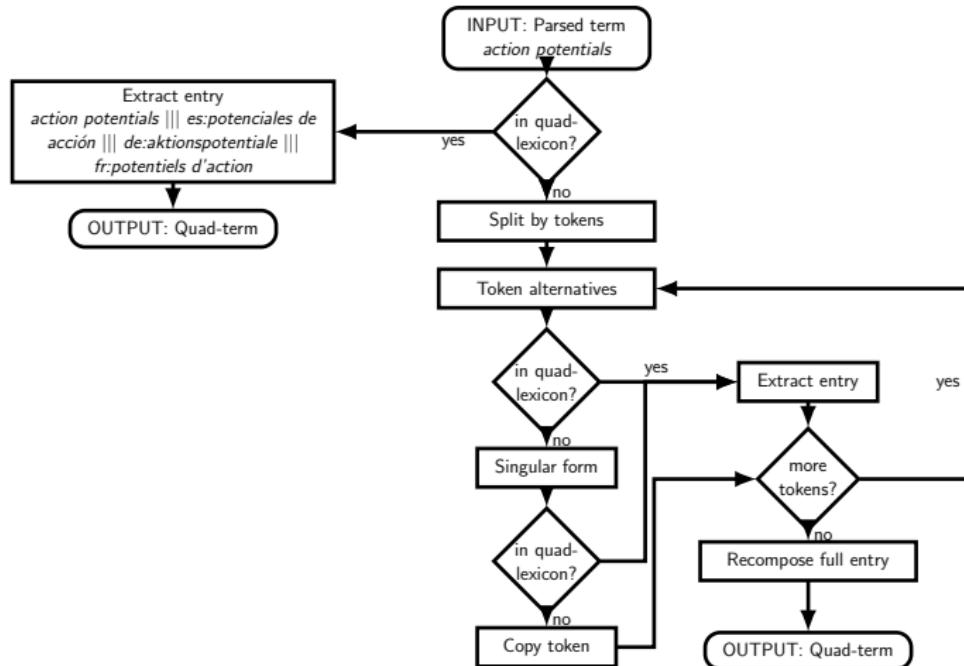

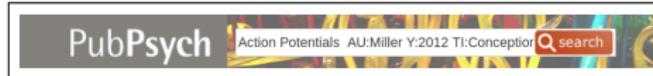

Query Translation

Application to Query Translation

Query Translation

Application to Query Translation

Query Translation

Coverage

- Analysis of 2 million system logs (queries)

Source	Terms		Tokens	
	trad (%)	untrad (%)	trad (%)	untrad (%)
MeSH	167,152 (7.7%)	2,010,469 (92.3%)	2,225,598 (64.2%)	1,240,800 (35.8%)
QuadLex	324,033 (14.9%)	1,853,588 (85.1%)	2,945,959 (85.0%)	520,439 (15.0%)

- **85%** of tokens are translated

Query Translation

Comments

- Using the quadrilingual lexicon to translate an entry does not assure a **correct translation**:
 - Noise
 - The concatenation of word translations does not need to correspond to the term translation
- Copying the source word into the output does not necessarily correspond to a **wrong translation** (e.g. named entities)

Titel	Selbstzuwendung, Selbstakzeptanz, Selbstvertrauen. Psychotherapeutische Interventionen zum Aufbau von Selbstwertgefühl
Person(en)	Potreck-Rose, Friederike; Jacob, Gitta .
Quelle	Stuttgart: Klett-Cotta, 2013 (8., erw. u. aktualis. Aufl.), 245 S., EUR 26,95 [Leben lernen, Nr. 163], ISBN: 978-3-608-89148-5
Jahr	2013
Sprache	German
Abstract	<p>Psychotherapeutische Interventionen zum Aufbau von Selbstwertgefühl werden vermittelt. Im Theorieteil wird das Grundlagenwissen zusammengefasst und die vorhandene Literatur zum Thema Selbstwert wird auf ihren Nutzen für die psychotherapeutische Arbeit hin betrachtet. Im Praxisteil werden methodisch aufeinander aufbauende Interventionen zur Steigerung des Selbstwertgefühls vorgestellt. Das zugrunde liegende therapeutische Konzept definiert den Prozess der Selbstzuwendung als entscheidenden Schritt für die Entwicklung und Förderung von Selbstakzeptanz und Selbstvertrauen. Die konkreten Interventionsvorschläge werden ergänzt durch eine umfangreiche Sammlung von Übungen für Patienten. - Inhalt: (A) Theorie. (1) Zum Stellenwert von Selbstwert, Selbstvertrauen und Selbstakzeptanz in der Psychotherapie. (2) Theoretische Grundlagen (Begriffsbestimmungen; Korrelate des Selbstwertes; Quellen des Selbstwertes; Dynamik des Selbstwertes). (3) Die vier Säulen des Selbstwertes (Selbstakzeptanz; Selbstvertrauen; soziale Kompetenz; soziales Netz). - (B) Praxis. (4) Stufen der Selbstzuwendung: Sensibilisierung des Ichs (Achtsam sein; sich selbst liebenvoll begegnen; für sich sorgen); (5) Schritte zur Selbstakzeptanz: Differenzierung des Wertesystems (sieben Lebensgebiete; Rollenkünster; Energiekreis; Energiesammler). (6) Wege zum Selbstvertrauen: Selbstregulation und Selbstkontrolle @Bedeutung von Selbstregulation und Selbstkontrolle für den Selbstwert; Grundprinzipien der Selbstveränderung; mit Zielen arbeiten). (7) Risiken selbstwertstärkender Interventionen. (8) Interventionen zum Aufbau des Selbstwertgefühls im psychotherapeutischen Gesamtkonzept. - Das Buch wurde für die achte Auflage erweitert und aktualisiert.</p>

Data-Based Systems: SMT vs. NMT in CLuBS

- SMT needs a system per language pair
- SMT has a translator for titles and another one for abstracts
- SMT uses pivot translation for unknown language pairs

Content Translation in PubPsych

Data-Based Systems: SMT vs. NMT in CLuBS

- SMT needs a system per language pair
- SMT has a translator for titles and another one for abstracts
- SMT uses pivot translation for unknown language pairs

- NMT has a single system for multiple language pairs and structure
- NMT allows zero-shot translation
- NMT shows higher performance (BLEU) for the evaluated pairs

Content Translation in PubPsych

Approaches to Domain Adaptation

Transfer learning with back-translation of in-domain data

Other approaches

- Use of EMEA and Scielo
 -  Not similar enough
- Use synsets to generalise among languages
(tested in a general domain)
 -  Minor improvements

Content Translation in PubPsych

Approaches to Domain Adaptation

Other approaches based on Wikipedia

- Extract parallel sentences in the domain of psychology and health
 - ☒ As a pre-processing, language-dependant, too much noise in general
- Extract multilingual sentences in the domain of psychology and psychiatry
 - ☒ As unsupervised on-line training, language imbalance, still need of back-translation

Translation in CLuBS

Lots of experiments, evaluations and reports
with few but very good hands to do them:

4 Evaluation

- Experiment Design
- Experiment in Progress ...

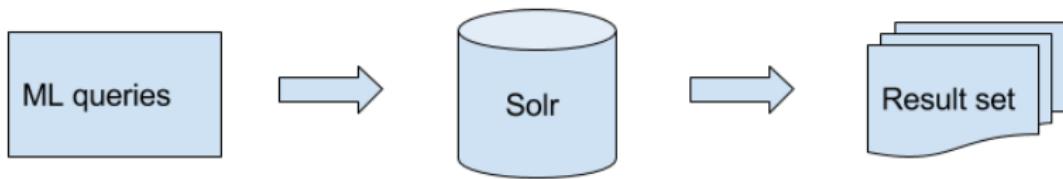

Evaluation

Experiment Design

- 50 queries in 4 languages will be used to query Solr instances with different translated components
- Each query gets a topic description to determine relevant documents
- For 200 searches (4×50 queries) we store up to 10 results
- Remove duplicates in retrieved records
- Pool documents per language
- Assessors assess relevance of documents in their language
- Measuring relevance

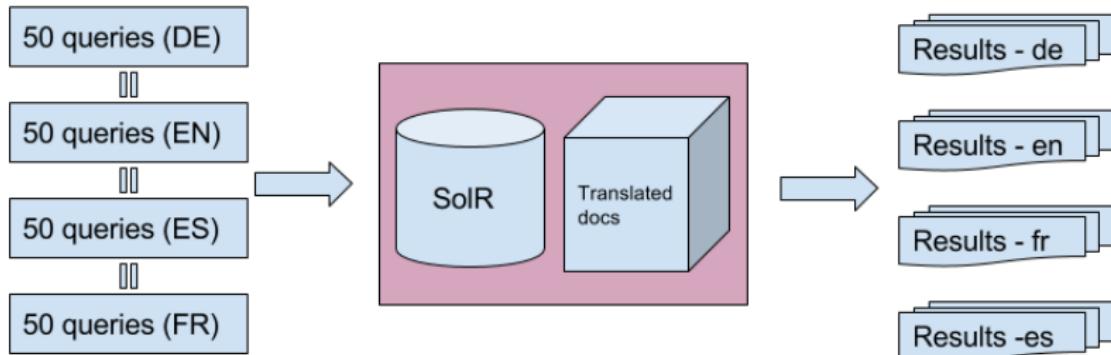

Evaluation

Experiment Design

Evaluation

Solr with translated content

Evaluation

200 original queries

- In English, Spanish, French and German
- Domain experts determined the information need for each query quadruple
- Example: „immigrant depression Canada“ - "immigrant dépression Canada" - "Einwanderer Depression Kanada" - "depresión inmigrantes Canadá"
- Topic description: Highly relevant are documents providing information on the prevalence of depression among immigrants in Canada. Partially relevant are documents containing information on depression of immigrants in other countries.

Evaluation

Relevance Assessment

- 1 **Highly relevant** - the record as presented fulfills the information need and is highly relevant
- 2 **Partially relevant** - the record partially fulfills the information need, but there are some doubts as to whether the whole information need is covered
- 3 **Not relevant** - record does not fulfill the information need

Title

[Die Diagnostik belastender Lebensereignisse in der klinischen Routine mittels eines (halb)standardisierten Interviews]

Author

demo_author

Abstract

Bei je 50 stationär und ambulant behandelten kinder- und jugendpsychiatrischen Patienten wurde zusätzlich zur Routinediagnostik ein halbstandardisiertes, blind durchgeführtes Interview zu den psychosozialen Belastungsfaktoren entsprechend der modifizierten Version der Achse V des Multiaxialen Klassifikationsschemas erhoben. Es ergaben sich vergleichbare Informationsmöglichkeiten beim Interview und bei der stationären Routinediagnostik. Vergleichsweise weniger Informationen mit einer entsprechend geringeren Reliabilität zeigten sich hingegen in der ambulanten Routinediagnostik. Es werden Hinweise darauf gegeben, welche psychosozialen Faktoren besser mittels eines Interviews und welche besser mittels der klinischen Einschätzung erhoben werden könnten., Reports on the assessment of 50 inpatients and 50 outpatients in child and adolescent psychiatry using two different methods. Each patient was diagnosed once using routine clinical methods and again in a semistructured interview on psychosocial stressors based on the modified version of Axis V of the Multiaxial Classification Scheme for Psychiatric Disorders in Children and Adolescents. Interviewers were blind to patients' clinical diagnoses. The information acquired during inpatient treatment was comparable to that obtained by interview. However, more information and more reliable information was acquired during the interview than during outpatient treatment. Results indicate that some psychosocial factors can be better assessed by interview, while others are better assessed through clinical diagnosis.

Evaluation

Measures

- R-precision: If the number of relevant documents is $r \leq 10$, we only look at the documents up to the r -th rank of the list. If the number of relevant documents is > 10 , then we calculate R-precision based on 10.
- P@10: We calculate the precision at 10 for the result list.
- Recall(10): How many of the relevant documents were found?
- nDCG (discounted cumulative gain): rank-based measure

Interannotator Agreement

2 raters	Translations from Spanish		Translations from German	
	Cohen's Kappa	Scott's Pi	Cohen's Kappa	Scott's Pi
Based on 3 categories highly, partially, non relevant)	0.556	0.554	0.502	0.494
Based on 2 categories (relevant, non)	0.702	0.702	0.664	0.664

According to Landis and Koch [5], the kappa for all categories can be interpreted as ranging from fair (0.21 - 0.40) and moderate (0.41 - 0.60) to substantial (0.61 - 0.80) agreement. The same applies for Scott's Pi.

Evaluation

Intraannotator Agreement

	Rater 1 (German source)		Rater 2 (Spanish source)	
	Cohen's Kappa	Scott's Pi	Cohen's Kappa	Scott's Pi
Based on 3 categories (highly, partially, non relevant)	0.494	0.488	0.6532	0.653
Based on 2 categories (relevant, non)	0.594	0.586	0.554	0.554

According to Landis and Koch [5], the kappa for all categories can be interpreted as ranging from fair (0.21 - 0.40) and moderate (0.41 - 0.60) to substantial (0.61 - 0.80) agreement. The same applies for Scott's Pi.

Evaluation

Learnings from Pilot Experiment

- To minimize bias due to MT, show original language content to raters: French content to French rater, etc.
- To maximize information for raters: extract English translation of content that is provided from sources
- Assessed 50 docs/h (for comparison: assessment of pictures/short documents in CH: 400 docs/h)
- It is an extremely hard task due to topics, domain vocabulary and the nature of abstract (very compressed information)
- Show keywords

Evaluation

Example: Adapting Topic 'Addiction'

Highly relevant are documents investigating how addiction influences personality and the influence of personality on the probability of drug addiction. Partially relevant are documents on the general psychological effects of drug addiction.

Highly relevant are documents investigating how addiction influences personality and the influence of personality on the probability of drug or non-substance addiction. Partially relevant are documents on the general psychological effects of addiction.

3. Separating implicit gender stereotypes regarding math and language: Implicit ability stereotypes are self-serving for boys and men, but not for girls and women

Heinecke, Petra.; Jelonek, Petra.
2011 - Source: Sex Roles, 2011, 64 (5-6), 324-335, 56 Literaturang.
Investigated implicit gender stereotypes related to math and language separately, using go/no-go association tasks. Samples consisted of 100 children (N = 187) and university students (N = 189) in ...

Evaluation

Discussion

- Assessments in such a specialized domain are time consuming
- Domain specificity calls for the involvement of experts → crucial for our project
- Multilinguality makes every problem worse
- Real data is messy, real systems are messy
- Multilinguality is far from being solved, e.g. user interactions, preferred languages, UI design, etc.

Evaluation

Discussion II

- CLuBS addresses multilinguality through translation
- The nature of the engine depends on the element to be translated (*keyword vs. abstract*)
- All engines have to be adapted to the domain and that implies a need for in-domain data
- A real scenario such as Pubpsych generates continuously in-domain data (*1.0k docs. in 2017 vs. 1.8k docs. today*)
- So, the MT tomorrow will be better than the MT today.
But... CLIR will be better because MT is better?

Ort in **Polizeigewahrsam** .

<2en> bis zur **Gerichts@@ verhandlung** befand sie sich
vor Ort in **Polizei@@ gew@@ ahr@@ sam** .

Extra Slides

Multilingual Word Embeddings in NMT

- ML-NMT systems create a semantic representation in a **multilingual common space**
- But (seq2seq) NMT uses much more than multilingual word embeddings for translating (e.g. sentence embeddings, attention)
- More important... NMT uses a *language model*, the **decoder**

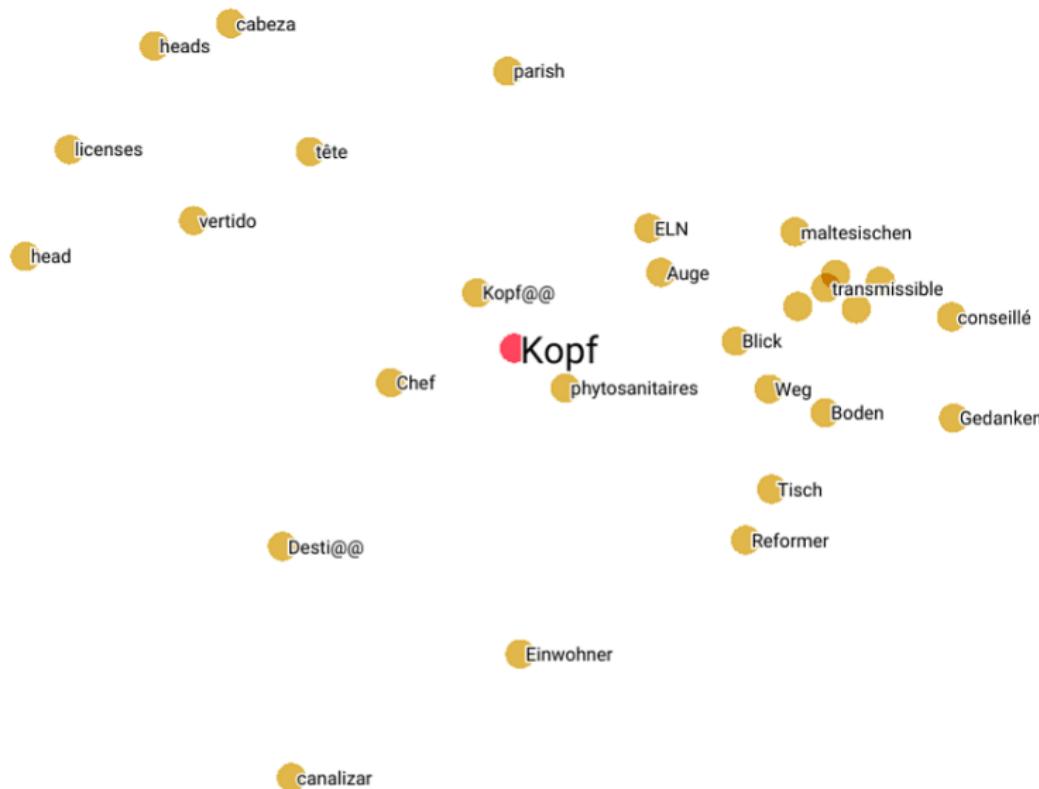

Extra Slides

Multilingual Word Embeddings for Query Translation

- Purpose: **improve coverage** with MLWE (avoid verbatim translations)
- **In-domain terms** still translated by MeSH quad-lexicon
- **Out-of-domain terms** translated by this by-product of the general domain NMT system

Comments

- Word embeddings do not deal with multiword expressions or compounds
- Embeddings describe **semantics** not language, a synonym or a translation or a synonym of a translation have the same right to be close to a given word
 - **Query expansion** or query translation?
- Even within a language, translations do not need to be the **closest word**

Reranker

Input

Pairs source word w_1 and n-best list of translations w_2

Dataset

BPEd Quad-lexicon

Features

22 features: basic, lexical, semantic and LM-like

Algorithms

Mainly SVM, XGB and MLP

Basic Features

- 2 words** (w_1 –source–, w_2 –target–)
- 2 languages** (L_1 , L_2)
- 2 subunits**: source is a BPE subunit instead of word
(srcSubUnit), or src and tgt have a BPE mark
(bothBPEmark)

Lexical Features

- 3 length** in characters without BPE mark @@ ($|l_1|, |l_2|, |l_1|/|l_2|$)
- 1 Levenshtein distance** between tokens w_1 and w_2 (lev)
- 3 character n-gram** similarity
(cosSimN2,cosSimN3,cosSimN4)
- 1 Levenshtein distance** between Metaphone 2 **phonetic keys** (levM2)

Semantic Features

1 Similarity between **words**

$$sim(w_1, w_2)$$

1 **Rank** of the translation, rankW2

4 Distances in similarities **to certain ranks**

$$sim(w_1, top1) - sim(w_1, w_2)$$

(simRankt1,simRankWnext,simRankt10,simRankt100)

Language Model-like Features

- 1 Similarity between **previous words**

$$sim(w_{1-1}, w_{2-1})$$

- 1 Similarity between **bigrams**

$$sim((w_{1-1}+w_1)/2, (w_{2-1} + w_2)/2)$$

Extra Slides

Dataset: BPED Quad-lexicon

Need for positive and negative examples:

- Positive: the translation w2
- Negative: a word w3 in the n-best list **close** to w2

Extra Slides

Dataset: BPED Quad-lexicon

Need for positive and negative examples:

- Positive: the translation w2
- Negative: a word w3 in the n-best list **close** to w2

Current approach takes as w3 the +1/-1 word in the cosine similarity ranking

- For top1 translations always +1;
- higher probability to -1's to get a balanced corpus (5/6!)

Extra Slides

Dataset: BPED Quad-lexicon

Need for positive and negative examples:

- Positive: the translation w2
- Negative: a word w3 in the n-best list **close** to w2

Current approach takes as w3 the +1/-1 word in the cosine similarity ranking

- For top1 translations always +1;
- higher probability to -1's to get a balanced corpus (5/6!)

Probably good for margin-based algorithms, but for others, should it be **completely random**?

Extra Slides

Dataset: Comments

- We can arbitrarily create a data set that allows $> 90\%$ accuracy
- No reason for a concrete design: need for extrinsic evaluation in MT
- Manual translation of the 500 queries test set (now, literally, ~ 300)
- Even then, we will not know the effect on retrieval

Extra Slides

Conclusions

No-one would use MLWE for word translation...

No-one would use MLWE for word translation... **But:**

- We do not aim at perfect translation, but at good retrieval
- It has been shown that retrieval can be improved by query expansion
- MLWE can perform at worst multilingual query expansion
- The specific in-domain terms are still translated by MeSH
